HOW TO EXPORT YOUR TRACKS BEFORE MASTERING:

Easy mastering:

- If you have finished mixing your song, make the mixdown.
- Make sure you have removed any effect or compressor on insert in the master channel.
- keep the **maximum peaks between -9 and -6 Dbfs**
- Put the **left locator at beat 1** and **right locator at the end of the song**. Make a mixdown.
- You can create the stereo file with a resolution of **48 khz 24 bit** or **44.1 khz 24/16 bit**. Keep the settings of your audio project.

Stem mastering:

- Make sure you have removed any effect or compressor on insert in the master channel.
- Create stem files: one stereo file for the rhythm section, one for the instrumental session, one for the vocal session.
- Keep the **maximum peaks between -9 and -6 dBFS**. To do this, work on master fader!
- You can create the stereo files with a resolution of **48 khz 24 bit** or **44.1 khz 24/16 bit**. Keep the settings of your audio project.
